ABOUT ME

Software Engineer and Information Systems Engineer with 5+ years building scalable full-stack and AI-powered products used by millions. Experienced in multi-LLM architectures (OpenAI, OpenRouter, Groq) balancing latency, cost, and quality, with a stack spanning React/Next.js, Node.js, Python, Go, PostgreSQL, and AWS/Docker. I care about outcomes over output — I engage with stakeholders, understand the business context, and take ownership from problem definition through delivery. Passionate about using AI to simplify complex systems and drive real impact, especially in domains where the stakes are high.

EXPERIENCE

Software Engineer II

United States

Dex

2025-Current

- Led design of a multi-LLM integration architecture (OpenAI, OpenRouter, Groq) for CRM AI features, balancing latency, cost, and response quality.
- Implemented full-stack CRM features across web and mobile using Vue 3, Node.js, Prisma, PostgreSQL, and React Native to improve user workflows.
- Diagnosed production performance bottlenecks, strengthened data integrity, and improved AWS/Docker deployment reliability.

Software Engineer II

United States

Mint Mobile

2024-2025

- Developed and maintained high-traffic e-commerce services supporting 2–3M mobile subscribers, building REST APIs with PHP, TSOA, and WordPress.
- Built custom WordPress plugins that let marketing teams update landing-page content without developer support, shortening time-to-publish.
- Maintained a shared React/Next.js component library used across internal and customer-facing apps to improve UI consistency and developer velocity.

Software Engineer I

Argentina

Pollux

2022-2024

- Delivered full-stack solutions across multiple client projects using PHP, Next.js, AWS, and Docker, collaborating with 3–4 developers to launch scalable production systems.
- Conducted code reviews and mentored junior engineers, improving code quality and onboarding speed.

SKILLS

Skills: Python, FastAPI, Node.js, Express, TypeScript, React, Next.js, PostgreSQL, Redis, MongoDB, Prisma, OpenAI, OpenRouter, Groq, Kafka, AWS SQS, SNS, SES, REST, GraphQL, AWS, Docker, php, Laravel, Vue.js

EDUCATION

Universidad Tecnológica Nacional De Rosario, Argentina

2019-2024

Information System Engineering

ACTIVITIES

South America/South Finals at ICPC

2023

Placed 17th nationally in the Argentinian Programming Tournament (TAP), Qualified for the 2024 ICPC South America Regional Finals, representing Universidad Tecnológica Nacional (UTN), and placed 30th

Trading Algorithmic Competition at GTS

2023

Won the GTS Trading Algorithmic Competition, building automated trading strategies on simulated historical market data across global currencies. Applied analytical and creative problem-solving in a team setting to improve returns and outperform competing teams.
